

# [PORTABLE MICRO-CONTROL DEVICE AND CONTROLLER]

## Abstract

A portable micro-control device and a controller are provided. The micro-control device comprises a viewer, an input device, a power supply and a controller. The controller further comprises a mini-root hub, a power module, a local buffer module, an output controller, an input controller and a processor. The portable micro-control device uses a simple processor operating on a simple operating system. Therefore, a user can easily copy, move, backup, delete, edit or format data on the multi-media devices and storage devices plugged into the portable micro-control device.
